

A dark night. A and B are far apart.

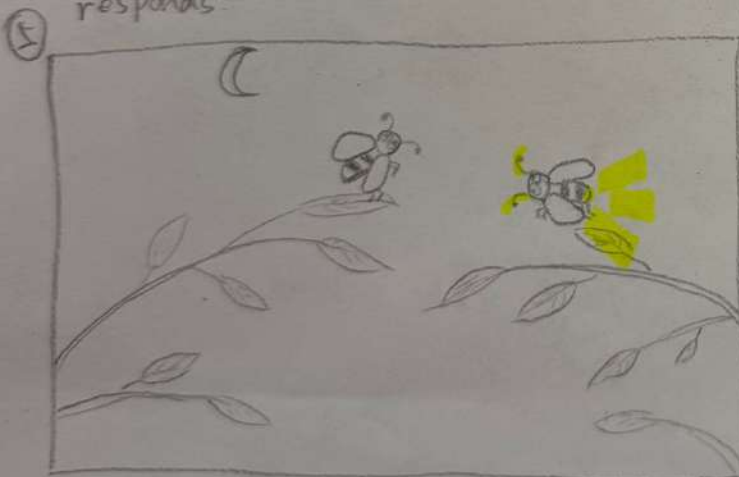

Firefly A initiates with a distinct flash.

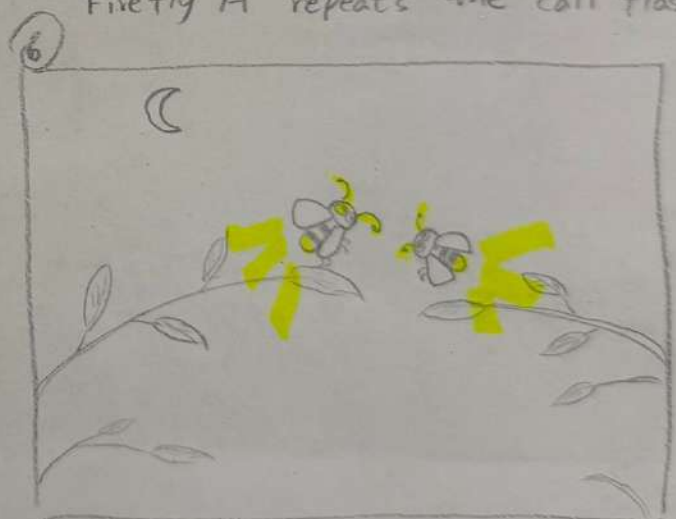

Firefly B observes the flash and responds.

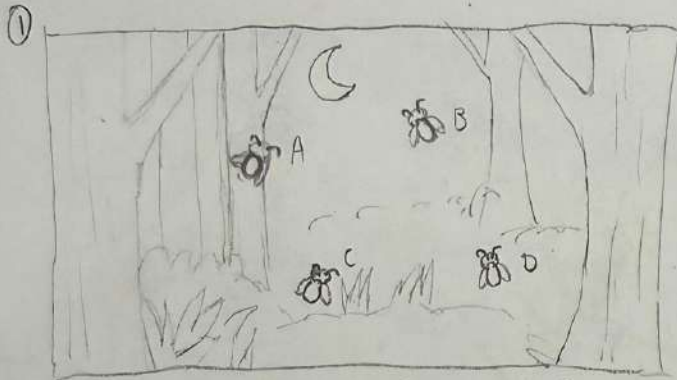

Firefly A repeats the call flash.

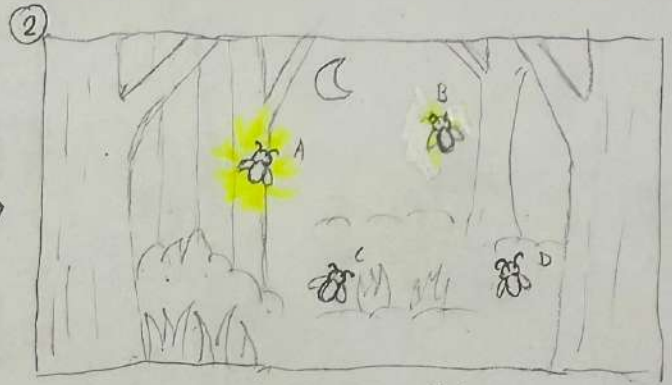

Firefly B responds faster, reducing the interval.

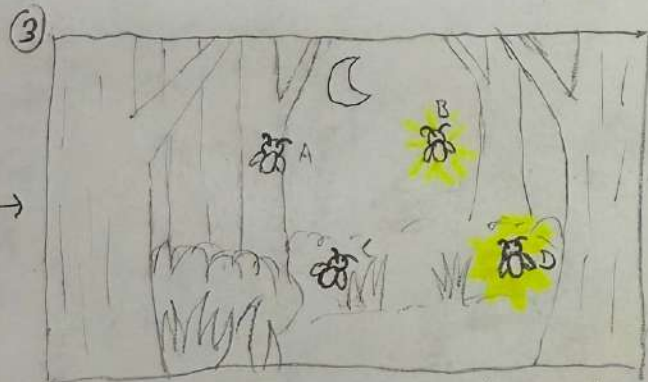

They eventually flash together in perfect unison.

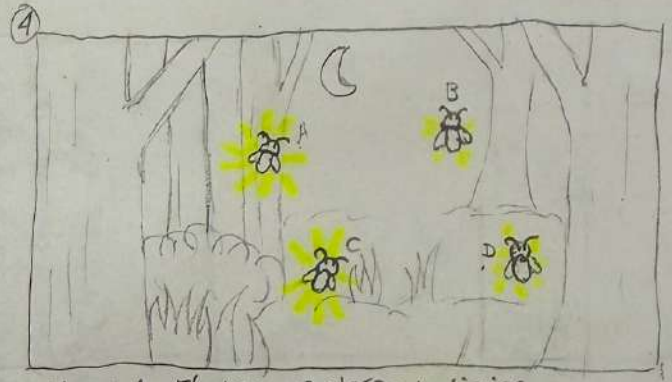

Frame 1: Four fireflies in a dark forest. Group is initially dark.

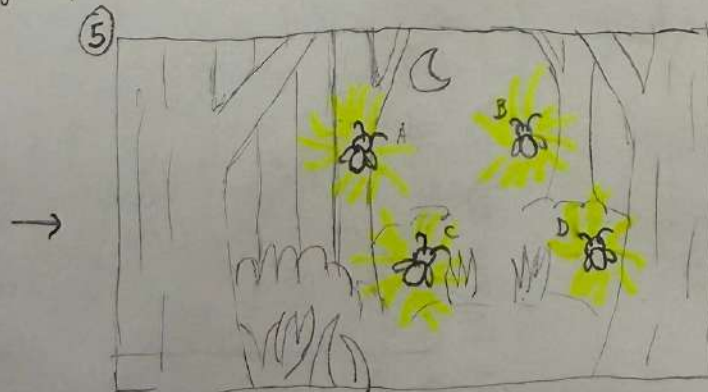

Frame 2: Firefly A starts flashing

Frame 3: Fireflies B and C respond at slightly different times (delayed response)

Frame 4: Flashes are closer in timing, synchronization forming.

Frame 5: Everyone flashes together. Synchronized flashing!

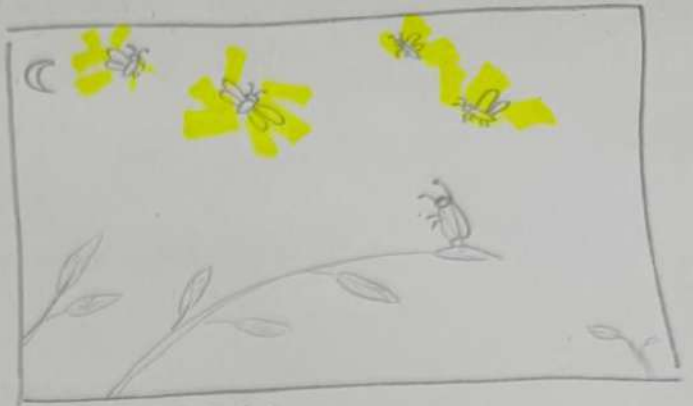

①

Dark forest (Call to Action)

A male flies above. A female is stationary on vegetation below.

②

(Male Flash)

Several males, including the flier, produce their synchronized flash sequence.

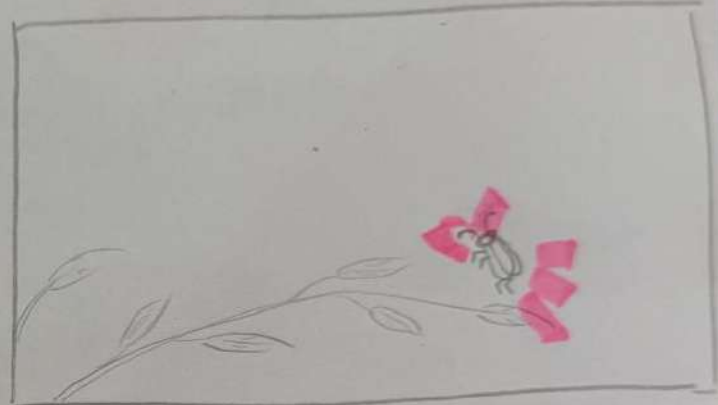

③

(Dark interval)

All males stop flashing.

④

(Female Response)

The female produces a single response flash during the dark interval.

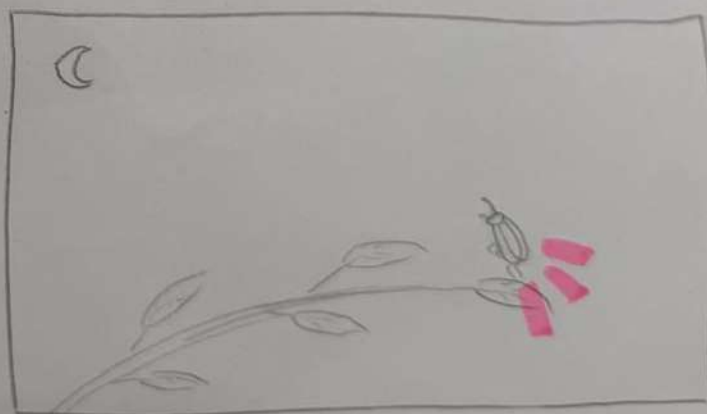

⑤

(Male second Flash)

The males flash again, responding to the courtship sequence.

⑥

(Female Second Response)

The female flashes again during the next dark interval, confirming interest.
